

CS Cone Crusher

What we do today is to ensure the future of our
group with youth and spirit forever and ever.

- SBM

The most professional Cone Crusher in China

SBM CS cone Crusher Overview

For higher productivity, better reliability and flexibility, long service life, and better final product quality, the Symons type cone crusher is absolutely your best choice.

Symons type cone crusher offer several outstanding features such as excellent tramp release system, unique hydraulic lifting system, high crusher throw and reasonable cavity design, all of these features ensure the Symons type cone crusher can offer the unbeatable performance in secondary, tertiary and quaternary applications.

If your aggregate or mining business demands the 24-hours running, high-reduction, big capacity application, you will find the Symons type cone crusher optimized for your demands. The innovations like the stable lubrication, excellent sealing feature, great abrasive material applied in key components and rugged construction effectively reduce the wear rate, extend the replacement period of the spare parts, evidently reduce the production cost in per ton hour material processed. All of these can help you to achieve the highest level of profitability.

World-class craftsmanship and materials

World-class design

CS cone crusher Main Features and Benefits

1. High performance
2. High stability and reliability
3. Easy cavity dumping
4. Easy maintenance and easy operation
5. Low cost and wide application

CS cone crusher Technical Data

Type	Dia. of cone	Cavity	Feed Opening	Discharge Setting	Capacity	Counter Shaft	Power	Weight	Overall Dimension
	mm(inch)		mm	mm	ton/hour	r/min	kw	ton	mm

How JC Series Jaw Crusher works

CS cone crushers are widely applied in cement making industry, building, sand making, metallurgical industry, etc. They are suitable for both metallic minerals and non-metallic minerals, such as iron ore, nonferrous metal ore, granite, limestone, quartzite, sandstone, pebble, etc.

Through a horizontal axle and a pair of bevel gear, the motor drives the eccentric sleeve to revolve. The revolution of the eccentric sleeve makes the mantle move towards to the bowl liner from time to time. In this way the ores and rocks will be pressed and finally crushed.
